Fluency Chart Directions

A Rapid Recognition Chart is created with 30 squares- five rows of six squares.

The first row contains six words for review. **The subsequent rows contain the same six words in differing orders.**

The teacher points to and reads each word in the first row.

The teacher again points to each word as the students read the word with the teacher.

The teacher then touches each square on the chart, starting across the first row and working down and across each of the remaining rows.

As the teacher touches each square, the students read the word in the square.

The teacher can time the students.

After the students have read all the words, the teacher reviews any confusing words by touching the words at random one at a time as the students read them.
